The Draft Convention on Crimes Against Humanity: What to Do With the Definition?

Darryl Robinson*

4.1. Overview of the Chapter

A centrally important and influential feature of the Draft Convention will, obviously, be its definition of crimes against humanity. For reasons that will be canvassed below, it is most likely that the Draft Convention will use the definition from Article 7 of the Rome Statute. There are however significant legitimate concerns about aspects of Article 7, most particularly the ‘policy element’. Accordingly, it is highly desirable that the commentary to the Draft Convention mitigate the concerns by explaining some key terms in accordance with pertinent authorities. This chapter proposes some such clarifying commentary.

The Article 7 definition features the now-iconic contextual element of a ‘widespread or systematic attack directed against a civilian population’. The definition of ‘attack’, in Article 7(2)(a), requires a ‘State or organizational policy’. This raises legitimate questions about the relationship between ‘policy’ and ‘systematic’, whether they are duplicative, and whether the policy element will complicate and restrict crimes against humanity prosecutions. This chapter will look both at the logical structure of Article 7 and at past authorities to show that ‘policy’ is, and must be, different from and less demanding than ‘systematic’. The authorities will show some of the concrete ways in which ‘policy’ is more modest.

* Associate Professor, Queen’s University, Faculty of Law. This research was facilitated by a research grant from the Social Sciences and Humanities Research Council of Canada as well as the Antonio Cassese Prize for International Criminal Law Studies. I am grateful for the very helpful assistance of Gillian MacNeil. This chapter draws at points on a related chapter, Darryl Robinson, “Crimes Against Humanity: A Better Policy on ‘Policy’”, in Carsten Stahn (ed.), The Law and Practice of the International Criminal Court, Oxford University Press, Oxford, 2015. That chapter raises concerns about trends in some early ICC cases – and notes the better trajectory of later cases – whereas this chapter proposes commentary for the Draft Convention on crimes against humanity.
The proposed commentary draws on national jurisprudence and other authorities, showing that the policy element is an *in limine* filter screening out situations of unconnected ordinary crimes. It should not be elevated to a major barrier to legitimate prosecutions. Such commentary would be valuable not only in relation to the Draft Convention, but also for customary law, by showing the consistency of authorities in support of a workable definition.

4.2. Introduction

The Draft Convention is a welcome initiative for many reasons. War crimes and genocide are subjects of treaty obligations, whereas the third core crime – crimes against humanity – lacks the same clarity of enforcement obligations. This is particularly regrettable given that crimes against humanity are of the greatest contemporary relevance (as they do not require armed conflict or special genocidal intent). A convention would remove ambiguities about the obligation to prosecute and about jurisdictional rules. It would ‘tighten the net’ by creating and strengthening a network of co-operation and prevention. Given that governmental authorities have accepted strong obligations in relation to financial crimes, it would be ironic and unacceptable that we do not establish similar obligations in relation to, for example, the extermination of hundreds of human beings. A convention would complement the ICC Statute system by emphasizing the ‘horizontal’ obligations of States to respond to crimes against humanity and to assist each other in doing so. And most elusively but perhaps most importantly, it could help instill a sense of responsibility to prevent, in the same vein as U.N. Member States recognize in connection with crimes of genocide.

The definition of crimes against humanity has been a matter of great uncertainty and fluctuation, largely because there has not yet been a general convention on crimes against humanity. Since the 1990s, there has been a convergence around the notion of a ‘widespread or systematic attack directed against any civilian population’. But instruments still differ in subtle ways. For example, the Statute of the International Criminal Tribunal for the former Yugoslavia (‘ICTY’), adopted in 1993, requires the presence of armed conflict. The Statute of the International Criminal Tribunal for Rwanda (‘ICTR’), adopted in 1994, drops the requirement of armed conflict but requires discriminatory motive. The ICC Statute,
adopted in 1998, drops both the requirement of armed conflict and of discriminatory motive, but it requires a “State or organizational policy”.

The most plausible options for the Draft Convention are either to adhere to the ICC Statute definition or to advance a new definition. Both options have advantages and disadvantages. The advantage of a new definition is that it would allow international lawyers to remove or rewrite the aspects of Article 7 that they regard as the most problematic. The most frequently-mentioned candidate for rewriting is the ‘policy element’, which is seen by many scholars and jurists as an unnecessary impediment to prosecution. Some lawyers would also seek to make other changes, such as removing the term ‘civilian’, in order to include crimes against combatants, or remove the requirement of awareness of the surrounding context.

At this time, the arguments for crafting a new definition are widely seen to be outweighed by the benefits of using the established definition in Article 7. First, to re-open and re-negotiate the definition would take an indeterminate amount of time and would have unforeseeable results. Indeed, a definition negotiated in the current international climate may be more restrictive, rather than more progressive, which is contrary to the aim of most of those who might prefer a new definition. Second, the ICC Statute definition was developed by States with broad participation, and thus is familiar to them and more likely to be accepted by them. Third, many States have already incorporated the ICC Statute definition into national laws; adhering to that definition thus simplifies implementation of the new convention. Fourth, to introduce another definition would increase the problems of fragmentation. It is desirable to avoid the complication of having one definition for some obligations and another definition for other obligations. Fifth, Article 7 is already regarded in some authorities as having the status of customary international law. Accordingly, it

---

On the Proposed Crimes Against Humanity Convention

seems highly likely that the Draft Convention will simply use the Article 7 definition.

Adopting the Article 7 definition does not mean however that the legitimate and widely shared concerns about the policy element should be neglected. On the contrary, the concerns about the definition should be addressed in accompanying commentary. This approach reaps the benefits of using the established definition while also seizing the opportunity to mitigate the main concerns. There are at least four advantages to this approach. First, commentary can facilitate acceptance by those who are concerned about the dangers of mis-interpretation or over-extension of the policy element. Second, the commentary can facilitate prosecution and make the convention more effective, by demonstrating how the policy element has been understood and applied. Third, by drawing on national and international authorities, many of which are not well known, the commentary can help show that there is considerable harmony in the different authorities, and thus reduce the current fragmentation in the law. Fourth, as International Law Commission (‘ILC’) commentary is often used to aid in interpretation and as a guide to customary law, it will be of assistance not only in relation to the convention but also for national and international courts applying crimes against humanity law for any reason.

This chapter will focus only on contextual elements, and in particular, the policy element. There are other aspects of the definition that could arguably benefit from clarification. For example, in my view, it would be desirable to clarify that the term ‘civilian’ includes all persons no longer taking part in hostilities. Others might want to clarify the term ‘organiza-

---

2 The ICTY has interpreted ‘civilian’ as having the same meaning as in Article 50 of Additional Protocol I, and thus as excluding prisoners of war and persons hors de combat. There are reasons to doubt this transplant from the detailed international humanitarian legal regime of the Geneva Conventions. The ICTY approach means, e.g., that large-scale torture of prisoners of war would not constitute a crime against humanity. This departs from important international case law. Arguably, ‘civilian’ should be given its previous and broader meaning of any person no longer participating in hostilities, since the purpose of the term is to exclude lawful attacks on military objectives. The ICTY relied on the principle of distinction, but the principle of distinction would also prohibit the massacre of prisoners of war. For discussion see Robert Cryer et al., An Introduction to International Criminal Law and Procedure, Cambridge University Press, Cambridge, 2014, pp. 240–242. Arguably it would also be desirable to recall the proposition that in peacetime, all persons are ‘civilians’.

PURL: http://www.legal-tools.org/doc/ae7041/
tion’. However, it could well be argued that these matters are best left to jurisprudence. Commentary should be parsimonious. Accordingly, the proposed commentary will focus on the policy element, because (1) it is the element which has raised the most concerns, (2) it is the most frequently misunderstood, and (3) it is the subject of quite consistent yet little-noticed jurisprudence. Thus, it is the issue for which it is most beneficial to highlight and draw attention to the authorities.

This chapter will: touch lightly on the issue of the customary law status of the policy element (primarily to explain that the proposed commentary is apt regardless of one’s view on that question) (section 4.3.); examine the problem with the policy element and the desirability of commentary (4.4.); and then explain the proposed comments along with their supporting authorities (4.5.). The proposed comments are that:

- The term ‘policy’ is not equivalent to the term ‘systematic’. ‘Policy’ does not necessarily require deliberate planning, direction or orchestration; it requires only that some State or organization must have at least encouraged the attack, either actively or passively.
- The purpose of the policy element is to screen out ‘ordinary crime’, that is, acts of individuals on their own unconnected criminal initiatives.
- A policy need not be expressly stated or formalized, and need not involve the highest levels of a State or organization. A policy may be implicit. The existence of a policy can be inferred from the manner in which the acts occur. In particular, it can be inferred from the implausibility of coincidental occurrence.
- While a policy will typically be manifested by the actions of a State or organization, it may also be manifested by a deliberate failure to act which is consciously aimed at encouraging an attack.

3 There is currently a debate about the meaning of ‘organization’, and whether the organization must be ‘State-like’ or whether it more broadly encompasses non-State organizations with capacity to inflict harm. ICC jurisprudence is converging on the latter view. Both views have merit, although I also incline to the latter view. It is possible that better and more refined tests for ‘organization’ are yet to be discovered, and thus I would not seek to entrench any test at this point.
4.3. Differing Plausible Views on Customary Status

The customary law status of the policy element is hotly debated and credible arguments are available on all sides. Scholarly opinion as to the customary status of the element has gone through cycles. Prior to the 1990s, the comparatively few scholars interested in crimes against humanity seemed to regard policy as a requirement.⁴ In the 1990s, as the element was recognized in the Tadić decision and the Rome Statute, popular scholarly opinion moved quite decisively against the element.⁵ More recently, there has been a resurgence, with scholars such as Luban, Schabas, Kress, Ambos and Wirth arguing that the element has support in precedents and is conceptually important.⁶ At this time, it is difficult to ascertain which is the minority and majority view.

For the purposes of this chapter, it is not necessary to resolve the customary law question. This chapter starts from the premise that the Rome Statute definition will likely be used in the Draft Convention, and asks what commentary should be included to ameliorate concerns about the policy element.

Nonetheless, I must at least lightly touch on the question, because some readers may feel that the policy element is so clearly against cus-

FICHL Publication Series No. 18 (2014) – page 108
The Draft Convention on Crimes Against Humanity: What to Do With the Definition?

In particular, I must briefly address the ICTY Kunarac case, because many scholars and jurists regard that case as determinative of the customary law question. In Kunarac, the ICTY Appeals Chamber declared rather categorically that there is “nothing” in customary law that required a policy element and an “overwhelming” case against it. An assertion by the ICTY Appeals Chamber is always entitled to great weight as an indicator of custom. I would however advocate some caution in this instance. As many scholars have noted, that assertion appeared only in a thinly-reasoned footnote; the authorities it cited are actually either silent on or indeed contrary to the Chamber’s assertion; and many authorities in favour of the policy element are simply ignored.

Furthermore, there is more to customary law than just ICTY/ICTR jurisprudence. For example, the Rome Statute, reflecting a simultaneous state statement of a great many States purporting to reflect customary law, is also entitled to some weight. There is also a long tradition of national and international case and other expert bodies that must be taken into account.

---

7 International Criminal Tribunal for the former Yugoslavia (Appeals Chamber), Prosecutor v. Kunarac et al., Judgment, 12 June 2002, IT-96-23 and IT-96-23/1-A, para. 98. The reasoning of the Chamber is almost identical to that in Mettraux, 2002, pp. 270–282, see supra note 5.

My own view is that, given the paucity, inconsistency and frequent vagueness of previous authorities, a fair observer will not find the authorities at this time decisively conclusive one way or the other. Many national cases, international cases, and other expert bodies indicate that a policy is needed, and many do not. Looking at this pattern of sparse authorities, a capable jurist could plausibly highlight those passages that seem to require a policy, or those passages that seem not to. Speaking for myself, I incline to the view that the element is custom. For me, given the indeterminacy of the ‘ascending’ analysis (the sources), what tilts the balance in favour is the conceptual, ‘descending’ analysis, that is, that the element is valuable for the coherence of the concept, as discussed in section 4.5.2.

However, you do not need to agree with me on the custom question for the purposes of this chapter. For example, you might be agnostic and agree that the case against the policy element is not so overwhelming as to warrant the disadvantages of re-opening and re-negotiating the definition, risking support, and increasing the fragmentation of the law. Alternatively, you may be firmly convinced that the element is not custom and that it is a legislative imposition. In that case, the fact remains that the element appears in the ICC Statute, in the national legislation of many countries, and will likely appear in the Draft Convention, and thus must be interpreted. Thus, you should be all the more supportive of clarifications intended to prevent the element from being interpreted as a major obstacle. Accordingly, regardless of our respective positions on the customary law question, we have an overlapping interest in commentary to clarify the element.

4.4. The Problem With ‘Policy’ and the Desirability of Commentary

A recurring and persistent problem with ‘policy’ is that one of the best-known connotations of the term implies something highly formal and official. In this connotation, it conveys something adopted at a high level, such as by a Cabinet or board of directors, and then promulgated to lower levels. In this sense, the word implies something more than mere orders or deliberately turning a blind eye to crimes: it suggests something special, momentous, deliberate and sanctified, more akin to a manifesto, programme or platform. However, that is not the only ordinary meaning of the term. Indeed, the “chief living sense” of the term simply connotes “a course of action adopted as expedient”. It is something the State or organization is deliberately doing – or encouraging others to do.

Among the understandable concerns raised about the policy element are that it might get interpreted to require direct proof of internal machinations and secret plans, or that it might be equated with ‘systematic’, contradicting the disjunctiveness of the threshold test. All of these concerns are legitimate. Indeed, the dangers have even come to pass in some particular decisions (see sections 4.5.1 and 4.5.3 below).

The concerns can be resolved if the policy element is interpreted in accordance with the national and international authorities, including those on which it was based. The problem, however, is that many of those authorities – including national cases and international expert bodies – are not well known. Thus, the very real risk is that judges, at the ICC or in national courts, will inject their own assumptions and reactions to the word ‘policy’, and thereby inadvertently create new and onerous requirements. Thus commentary drawing attention to the often overlooked but highly informative web of authorities on the modest role of the policy element can help to maintain the consistency and effectiveness of the law.

As I will strive to demonstrate below, the term ‘policy’ is a juridical term of art, adopted from Tadić and other sources. Its modest purpose is to screen out ‘ordinary crime’, that is, unconnected crimes committed by diverse individuals acting on their own separate criminal initiatives. The element does this by making explicit the logical corollary of excluding

---

unprompted individual crimes: to wit, they must be directed or encouraged by something other than isolated individuals, that is, a State or organization. It delineates the minimum required degree of ‘collectivity’, so that the acts can be described in the aggregate as an ‘attack’.

Four important features of the policy element, which have been consistently emphasized in the jurisprudence, help to underscore and serve this modest purpose. I will expand on these features below. First, the term ‘policy’ is not used in a bureaucratic sense: a policy need not be formalized, need not be stated expressly, and need not be defined precisely. In other words, it may be implicit. Second, a policy need not implicate the highest levels of a State or organization, although it does require more than the acts of one or two agents acting against instructions. Third, a policy may be manifested by State or organizational action or by deliberate inaction to encourage crimes where a State or organization has a duty to intervene. Fourth, and most importantly, a policy may be inferred from the manner in which the acts occur. It is satisfied by showing the improbability that the acts were a random, coincidental occurrence. These four features are mutually connected and consistent with the purpose of excluding ordinary random crime. Numerous scholars have noted these features of the policy element. Some of the jurisprudence will be reviewed below.

12 See below, section 4.5.3, for authorities.
14 See below, section 4.5.4 for authorities.
15 See below, section 4.4.1 for authorities.
16 Machteld Boot, Rodney Dixon and Christopher Hall, “Article 7”, in Otto Triffterer (ed.), Commentary on the ICC Statute of the International Criminal Court, C. H. Beck, München, 2008, p. 236 (“policy need not be formalised, and can be deduced from the manner in which the acts occur […] In essence, the policy element only requires that the acts of individuals alone, which are isolated, uncoordinated, and haphazard, be excluded”); Kriangsak Kittichaisaree, International Criminal Law, Oxford University Press, Oxford, 2001, pp. 97–98 (excludes individuals acting on own initiative without direction or encouragement from a State or organization, not formal, not express, not highest level, infer from circumstances); Cryer et al., 2014, pp. 235–239, see supra note 2 (exclude random criminality of individuals, infer from manner); Ambos and Wirth, 2002, pp. 30–34, see supra note 6 (policy excludes ordinary crimes, may be implicit and may be passive); Sadat, 2013, pp. 354, 372, see supra note 1 (exclude uncoordinated, haphazard, random acts);
The term ‘policy’, for all its faults, helps to convey a subtle difference from mere ‘attribution’. Under the normal rules of attribution in international law, acts would still be attributed to the State or organization, even if they were carried by one or two agents acting against the wishes of their State or organization. Crimes against humanity, by contrast, require slightly more involvement or implication of the State or organization. The degree to which the State or organization must be implicated has not yet been perfectly delineated in jurisprudence. We do know at least that it is intermediate between two points. On the one hand, the requisite link is more than just the acts of one or two rogue agents acting against orders. On the other hand, it does not require the involvement of the highest levels of the State or organization. And, of course, claims by a State or organization that acts are purely a matter of ‘rogue’ agents or ‘a few bad applies’ must be scrutinized with care. One would look at repetition or patterns of similar acts, a failure to respond to the acts, and so on, in order to deduce the true state of affairs.

Note that I am not advancing a ‘progressive’, ‘liberal’ or creative interpretation of the policy element. The points I would highlight are already established in national and international authorities with significant consistency, and these are the authorities on which Article 7 was based. Because many of the authorities are often unknown or overlooked, it is valuable to highlight them.

17 ILC Draft Articles on State Responsibility, Articles 4 and 7.
18 Nikolić, see supra note 13; Blaškić, see supra note 13.
19 Commission of Experts for Yugoslavia, 1994, paras. 84–85, see supra note 10; Special Court for Sierra Leone (Appeals Chamber), Prosecutor v. Issa Hassan Sesay, Morris Kallon, Augustine Ghao (“RUF Case”), Judgment, 26 October 2009, SCSL-04-15-A, para. 723, finding declared norms of the Revolutionary United Front (“RUF”) prohibiting rape, unauthorised looting, killings or molestation to be “a mere farce intended to camouflage the planned atrocities.
20 Of course, such terms are always admittedly relative, as they depend on one’s view of the lex lata. For one who is convinced of a more restrictive and formalistic concept of ‘policy’, the propositions here will indeed appear ‘progressive’ or ‘liberal’ interpretations. However, the argument here is for an affirmation of the existing authorities.
4.5. Proposed Commentary

4.5.1. The Term ‘Policy’ Must Not Be Conflated With ‘Systematic’

The first proposed clarification is as follows: The term ‘policy’ is not equivalent to the term ‘systematic’. ‘Policy’ does not necessarily require deliberate planning, direction or orchestration; it requires only that some State or organization must have at least encouraged the attack, either actively or passively.

The confusion between the terms ‘policy’ and ‘systematic’ is a recurring and quite understandable problem, seen both in jurisprudence and in scholarly discourse. The confusion is understandable, because Article 7 is a rather complex provision. Article 7 refers both to ‘policy’ and to ‘systematic’, which certainly sound similar. Both terms deal with the collective dimension of the crimes – the connectedness, co-ordination or orchestration of the crimes. The confusion is all the more understandable given that a few passages in early authorities have even equated ‘policy’ with ‘systematic’.21

Nonetheless, the terms cannot be equivalent. Equating the terms would generate a contradiction within Article 7. Article 7(1) provides that ‘widespread’ and ‘systematic’ are disjunctive alternatives. Since Article 7(2)(a) requires ‘policy’ in all cases, to equate policy with systematic would amount to requiring systematicity in all cases, thereby contradicting the disjunctive test. It is a basic tenet of contextual interpretation that we try to read provisions coherently, that is, avoid unnecessary contradictions. In this instance, contradiction is very easily avoided if ‘policy’ is understood to be a more modest test. That understanding also conforms to the bulk of national and international authorities on the policy element, as well as the intent of the drafters.

To equate the terms not only creates a contradiction within Article 7 but also within other authorities as well. The very same authorities that introduced the now-hallowed ‘widespread or systematic’ test – for exam-

---

ple, the Tadić decision and the ILC Draft Code – also expressly coupled it with a policy element as an additional requirement.\(^{22}\) We should not lightly adopt an interpretation that renders those authorities self-contradictory as well. We should strive to understand them coherently.

The non-contradictory interpretation is also supported by the bulk of national and international authorities, which reveal a much more modest threshold for the policy element. ‘Systematic’ requires active orchestration, planning and directing the crimes; cases have referred to factors such as recurring patterns, use of resources, and involvement of high-level authorities.\(^{23}\) By contrast, ‘policy’ does not require active orchestration; it is also satisfied by implicit support or encouragement, including deliberate inaction to encourage crimes.\(^{24}\) Policy does not require high level involvement, can be implicit, and can be inferred from the improbability of random occurrence.\(^{25}\) The delineation between ‘policy’ and ‘systematic’ will be further specified in future jurisprudence.\(^{26}\) In addition to the differing degrees of planning and engagement, there may also be differences in the involvement of high-level authorities\(^{27}\) or the responsibilities of the organization.\(^{28}\)

\(^{22}\) See below, section 4.5.2.

\(^{24}\) As Kai Ambos and Steffen Wirth have noted, a key to distinguishing ‘policy’ from ‘systematic’ is that policy does not require active orchestration but can include encouragement through deliberate passivity. Ambos and Wirth, 2002, pp. 28, 31–34, see supra note 6.

\(^{25}\) Tribunal jurisprudence recognizes ‘improbability of random occurrence’ as part of the definition of ‘systematic’; however, as I argue here, improbability of random occurrence must be part of all crimes against humanity, since truly random crime is not a crime against humanity. Thus, the remainder of the systematic test (e.g., organized nature of the acts) is doing the real work and must be fleshed out.

\(^{26}\) As I argue here, given the inadequacy of ‘improbability of random occurrence’ as a definition of ‘systematic’, the requirement of ‘organized nature’ will need to be further elaborated in jurisprudence.

\(^{27}\) *Blaškić*, para. 203, see supra note 13.

\(^{28}\) It is arguable that the ‘systematic’ test should require a ‘State-like’ entity, with some power or authority. This would absorb some of the insights of scholars such as Claus Kreß and William Schabas. Any organization committing widespread crimes would fall within the definition, whereas non-widespread crimes would reach the threshold only where system-
Many scholars have noted that ‘policy’ must be a lower threshold than ‘systematic’, (1) in order to follow the authorities, (2) in order not to negate the disjunctive test, and (3) in order not to negate the position of the vast majority of delegations at the Rome Conference, who accepted only a moderate limitation to the disjunctive test.29

Early ICC experience has demonstrated the value of the proposed commentary. Some early ICC decisions have described the policy element in the same terms as the ‘systematic’ threshold. Some decisions have suggested for example that the policy element requires that the attack be “thoroughly organized”, follow a regular pattern, and involve public or private resources.30 That, however, is the early test for ‘systematic’ from Tribunal jurisprudence.31 Fortunately, more recent cases have been clearer in distinguishing the test for ‘attack’ from the ‘widespread or systematic’ character of the attack, and thus that ‘policy’ must be a lower threshold

30 International Criminal Court (Pre-Trial Chamber I), Prosecutor v. Katanga, Decision on the Confirmation of Charges, 30 September 2008, ICC-01/04-01/07-717, para. 396 (‘Katanga Confirmation Decision’); International Criminal Court (Pre-Trial Chamber I), Situation in the Republic of Côte d’Ivoire, Decision Pursuant to Article 15 of the ICC Statute of the Authorisation of an Investigation into the Situation in the Republic of Côte d’Ivoire, 3 October 2011, ICC-02/11-14-Corr, para. 43; International Criminal Court (Pre-Trial Chamber III), Prosecutor v. Gbagbo, Decision on the Prosecutor’s Application Pursuant to Article 58 for a Warrant of Arrest Against Laurent Koudou Gbagbo (Public redacted version), 30 November 2011, ICC-02/11-01/11-9-Red, para. 37 (‘Gbagbo Arrest Warrant Decision’).

31 See, e.g., International Criminal Tribunal for Rwanda (Trial Chamber I), Prosecutor v. Akayesu, Judgment, 2 September 1998, ICTR-96-4-T, para. 580 (‘Akayesu’).
than ‘systematic’. The ICC’s early experience shows how the confusion is understandable, and supports the view that other courts, including national courts, could benefit from the educative function of the proposed commentary.

4.5.2. The Purpose of the Policy Element Is Simply to Screen Out Ordinary Crime

The second proposed comment recalls the narrow purpose of the element. *The purpose of the policy element is to screen out ‘ordinary crime’, that is, haphazard or unco-ordinated acts of individuals on their own unconnected criminal initiatives.*

4.5.2.1. History and Purpose

It is widely accepted that the concept of crimes against humanity does not include ‘ordinary’ patterns of crime – the random, unconnected acts of individuals carrying out their own criminal designs. The policy element delivers on this assurance, by excluding the haphazard, coincidental crimes of individuals, carried out without any source directing or encouraging them.

Different deliberative bodies have noticed over the years that the ‘widespread or systematic’ test does not actually suffice to exclude ordinary crime. At the Rome Conference, a significant number of States, including the P-5 and many Asian and Arab States, raised precisely this concern about the disjunctive ‘widespread or systematic’ test. The concern arises because ‘widespread or systematic’ is disjunctive, and ‘widespread’ does not necessarily imply any connection between crimes. Crimes in a city or region could easily be ‘widespread’ but unconnected;

32 Helpful cases such as the Gbagbo Confirmation Decision and the Katanga Judgment, see supra note 1 are discussed below in 4.5.3.

33 The proposition that isolated or random acts of individuals do not constitute a crime against humanity is so frequently noted that it hardly needs a citation, but a few examples include: International Law Commission draft Code, 1996, p. 47, see supra note 21; Kunarac, Trial Judgment, 2001, see supra note 23; International Criminal Tribunal for the former Yugoslavia (Trial Chamber), Prosecutor v. Tadić, Judgment, 7 May 1997, IT-14-94-1-T, para. 648 (‘Tadić Trial Judgment’).

this would be ‘rampant crime’, not a crime against humanity. Like-minded delegations responded that an aggregate of truly random, unconnected crimes would not constitute an ‘attack’. Agreement was reached to retain the disjunctive ‘widespread or systematic’ test, provided that the definition of ‘attack’ explicitly delivers on the assurance that unconnected crimes are excluded.

The Rome Conference was not the first time that the over-inclusiveness problem had been noticed. Both the Tadić decision of the ICTY and the 1996 ILC Draft Code of Crimes suggested a solution. The Tadić decision employed the term ‘policy’ to explain the idea that an attack is not composed of “isolated, random acts of individuals”,35 and “cannot be the work of isolated individuals alone”.36 The Tadić decision equated the policy element with the requirement recognized by the ILC in the 1996 draft Code of Crimes, that an attack must be “instigated or directed by a Government or by any organization or group”.37 Both Tadić and the ILC draft Code described this requirement as additional to the ‘widespread or systematic’ test. At the Rome Conference, a Canadian compromise proposal advanced Article 7(2)(a), explicitly based on and footnoting to these passages in Tadić and the ILC Draft Code.38

The purpose of the policy element has been well-articulated by the Supreme Court of Peru in the Fujimori case. The policy element requires only that the casual acts of individuals acting on their own, in isolation, and with no one coordinating them, be excluded […] Such common crimes, even when committed on a widespread scale, do not constitute crimes against humanity, unless they are at least connected in one way or another to a particular State or organizational authority: they must at least be tolerated by the latter.39

35 Tadić Trial Judgment, para. 653, see supra note 33.
36 Ibid., para. 655.
37 Ibid.; ILC Draft Code, Article 18, p. 47, see supra note 21.
4.5.2.2. Elaboration on the Inadequacy of Widespread or Systematic

It is worthwhile to pause a moment here to examine a common counter-argument. It is frequently asserted that the ‘widespread or systematic’ test is by itself sufficient to exclude random, isolated crime, and thus that the policy element is not needed to perform that function. Appreciating the gap in the ‘widespread or systematic’ test will help illuminate the role and purpose of the policy element, which is to fill that gap.

While the ‘systematic’ branch succeeds in excluding random criminal activity, because it requires that the crimes be organized, the problem is that the alternative branch, ‘widespread’, merely requires scale. Consider for example a State with high crime, such as South Africa today, which faces thousands of murders each year. The number of crimes easily satisfies the ‘widespread’ requirement. Murders satisfy the base crime requirement. The crimes are committed against ‘civilians’, satisfying another element. Recall that a single crime committed within the requisite context qualifies as a crime against humanity. Thus, any person committing a single murder within that context satisfies the act and linkage requirements. The perpetrators are also aware of the surrounding context (that is, widespread crime against civilians).

Thus, if we do not have a policy element or some equivalent, and we apply the elements for crime against humanity, we will find that all elements are met. If we apply the tests literally, then each and every serious crime committed in a context of rampant serious crime would consti-

---

42 Thus, the common argument that no ordinary perpetrator could commit crimes on a ‘widespread’ scale, and thus that ‘widespread or systematic’ suffices to exclude ordinary crime, misses the point. ‘Widespread’ only applies to the contextual element. Committing a single crime within that context is all that is needed.
tute a crime against humanity.\textsuperscript{43} The test fails to delineate crimes against humanity from ordinary crimes and fails to delineate the scope of international jurisdiction.

Most jurists will agree that the ‘high crime rate’ scenario is not a crime against humanity. The most typical rejoinder to this example would be that unconnected crimes are not an “attack directed against the civilian population”. That reaction is correct. But then the next question is: “Can you articulate the specific requirement within your definition of ‘attack’ that actually excludes those unconnected acts?” The answer to that question is the first key to the riddle of crimes against humanity. Some legal element is needed to actually do the job of screening out unconnected ordinary crime. The solution adopted in Article 7 (and, \textit{inter alia}, the ILC Draft Code of Crimes) is the policy element. There may conceivably be other solutions. But understanding the problem helps (1) to understand the purpose of the policy element and (2) to avoid inflating it beyond its narrow purpose.

4.5.2.3. The Resulting Concept of CAH

The foregoing discussion sheds light on the concept of a crime against humanity. The hallmarks are \textit{atrocity} (the prohibited acts), \textit{scale} and \textit{collectivity}.\textsuperscript{44} It is well-recognized that there must be a high degree of \textit{either} scale (‘widespread’) or collectivity (‘systematic’). The more subtle and less-appreciated feature is that there must at least be \textit{some minimal degree of both} scale and collectivity before we can sensibly say that there was an ‘attack’ on a civilian population. Where there is insignificant scale – not even ‘multiple’ crimes – then there is no crime against humanity. And where there is no collectivity – coincidental, haphazard crimes – then there is no crime against humanity.

\textsuperscript{43} There are solutions other than a policy element. For example, one could require that the population be targeted on prohibited grounds, which would exclude most random ‘ordinary’ crimes; however the re-introduction of specific grounds, motives or special intents also raises difficulties.

The task of Article 7(2)(a) is to fulfil this less-obvious, less-recognized, yet still important function. It is an *in limine* test, screening out contexts that lack the minimum necessary scale and collectivity. Article 7(2)(a) avoids the absurdities of a purely disjunctive approach to scale and collectivity. The ‘multiple acts’ requirement screens out crime that has no scale. The policy requirement screens out crime that has no collectivity. Once these minimal standards are both met, then a prosecutor must prove a *high degree* of either scale (widespread) or collectivity (systematic).

### SCALE

<table>
<thead>
<tr>
<th>Widespread</th>
<th>Systematic</th>
</tr>
</thead>
</table>

### COLLECTIVITY

<table>
<thead>
<tr>
<th>Multiple</th>
<th>Policy</th>
</tr>
</thead>
</table>

An interesting theory that can aid in understanding the policy element has been advanced by David Luban. Luban argues that crimes against humanity concern our human nature as social and political animals. We live socially and we form organizations. Crimes against humanity are when our organizational nature turns against us, and people work together to commit atrocities; they are “politics gone cancerous”.45

45 Luban, 2010, see supra note 6.
Whereas genocide focuses on the group nature of the victims, the law of crimes against humanity is engaged by the group nature of the perpetrators. The link to a State or organization reflects the minimum requisite ‘associative’ dimension.

4.5.3. A Policy May Be Implicit, and Can Be Inferred From the Manner in Which the Acts Occur

The third proposed commentary is as follows: A policy need not be expressly stated or formalized, and need not involve the highest levels of a State or organization. A policy may be implicit. The existence of a policy can be inferred from the manner in which the acts occur. In particular, it can be inferred from the implausibility of coincidental occurrence.

These propositions recur consistently in the authorities. They are essential to address concerns that the policy element might require proof of secret plans or some formalistic adoption. Some early ICC cases demonstrate the dangers of precisely these mis-interpretations, although fortunately more recent ICC cases are reflecting the global jurisprudence.

The seminal Tadić decision, on which Article 7(2)(a) was based, emphasized that the “policy need not be formalized and can be deduced from the way in which the acts occur”.46 Indeed, this very passage was part of the proposal at the Rome Conference introducing Article 7(2)(a) and explaining its terms. Other Tribunal cases have repeatedly affirmed these features. Cases affirm that the “policy need not be explicitly formulated”47 and that it need not be conceived at the highest levels.48 The Blaškić decision is particularly instructive. In addition to confirming that “[t]his plan […] need not necessarily be declared expressly or even stated clearly and precisely”,49 the decision provides a valuable list of factors from which one may infer a policy, including repetition of the acts, the scale of the acts, and the overall political background.50

46 Tadić Trial Judgment, para. 653, see supra note 33.
48 Blaškić, para. 205, see supra note 13.
49 Ibid., para. 204.
50 Ibid.
Similarly, ICTR cases consistently held that a policy need not be adopted formally, and the Sierra Leone Special Court had little difficulty inferring a policy from the manner in which the acts occurred. Of course, after the Kunarac decision, these Tribunals now hold that the policy element is not required. Nonetheless, the earlier cases are helpful statements about the features of the policy element, especially as they in turn are based on other national and international jurisprudence.

Expert bodies and national cases, many of which are not as well known as the Tribunal cases, can valuably enrich our picture of the global approach. For example, the 1994 Commission of Experts on crimes in former Yugoslavia recognized the policy element. The Commission inferred the policy from the circumstances:

There is sufficient evidence to conclude that the practices of “ethnic cleansing” were not coincidental, sporadic or carried out by disorganized groups or bands of civilians who could not be controlled by the Bosnian-Serb leadership.

Notice here that policy is deduced by assessing the alternative hypothesis of coincidental, sporadic, uncontrolled crimes. Even more valuably, the Commission noted:

51 See, e.g., Akayesu, see supra note 31, para. 508; International Criminal Tribunal for Rwanda (Trial Chamber I), Prosecutor v. Rutaganda, Judgment and Sentence, 6 December 1999, ICTR-96-3-T, para. 68; International Criminal Tribunal for Rwanda (Trial Chamber I), Prosecutor v. Musema, Judgment and Sentence, 27 January 2000, ICTR-96-13-T, para. 204. Akayesu and later cases note that a policy need not be adopted formally by a State. It is now well accepted that a policy may also be that of a non-State organization.

52 Kunarac Appeal Judgment, see supra note 7, para. 98; International Criminal Tribunal for Rwanda (Trial Chamber III), Prosecutor v. Semanza, Judgment and Sentence, 15 May 2003, ICTR-97-20-T, para. 329 (citing Kunarac); Special Court for Sierra Leone (Trial Chamber I), Prosecutor v. Fofana, Judgment, 2 August 2007, SCSL-04-14-T, para. 113 (citing Kunarac).

53 As was correctly noted in International Criminal Court (Pre-Trial Chamber II), Situation in the Republic of Kenya, Decision Pursuant to Article 15 of the ICC Statute on the Authorisation of an Investigation into the Situation in the Republic of Kenya, 31 March 2010, ICC-01/09, para. 86. The early ICTY jurisprudence on policy was a helpful summation of other national and international jurisprudence. See also Sadat, 2013, pp. 372–373, see supra note 1.

54 Commission of Experts for Yugoslavia, 1994, para. 84, see supra note 10.

55 Ibid., para. 142. See also para. 313, inferring policy behind ethnic cleansing, rape and sexual assault, based on frequency of occurrence and the consistent failure to prevent or punish such crimes.
It should not be accepted at face value that the perpetrators are merely uncontrolled elements, especially not if these elements target almost exclusively groups also otherwise discriminated against and persecuted. Unwillingness to manage, prosecute and punish uncontrolled elements may be another indication that these elements are, in reality, but a useful tool for the implementation of a policy of crime against humanity.\footnote{Ibid., para. 85.}

National courts have also recognized that a policy may be implicit and can be inferred from circumstances. An Argentine court in the famous Junta\footnote{Cámara Nacional de Apelaciones en lo Criminal y Correccional Federal de Buenos Aires, ‘Causa No. 13/84 (Juicio a las Juntas Militares)’, Sentencia, 9 December 1985, Second Part, para. 3(c), available at http://www.derechos.org/nizkor/arg/causa13/cap20.html, last accessed on 28 April 2014 (emphasis added).} trial demonstrates with admirable clarity how policy is inferred from the improbability of coincidence:

The operative system put in practice […] was substantially identical in the whole territory of the Nation and prolonged over time. It having been proved that the acts were committed by members of the armed and security forces, vertically and disciplinarily organized, the hypothesis that this could have occurred without express superior orders is discarded.\footnote{Juzgado Federal de San Isidro, Causa N° 1.285/85, ‘Videla, Jorge Rafael y otros s/ presunta infracción a los arts. 146, 293 y 139, inc. 2do. del Código Penal’, Judgment, 13 July 1998.}

Similarly, a more recent case against Jorge Rafael Videla held:

It having been proved that the events were directly committed by members of the army, the State Intelligence Secretariat, the Buenos Aires Provincial Police […] organised vertically and disciplinarily, it does not appear probable – in this stage – that they could have been committed without orders from hierarchical superiors.\footnote{Tribunal de Alto Riesgo A, Sentencia C-01076-2011-00015 (Rios Montt, Rodriguez Sanchez) Of. 2o, Judgment, 2 May 2011, Folio 697, available at http://paraqueseconozca.blogspot.com/, last accessed on 28 April 2014:}

The same approach of inferring policy was also taken in the recent Guatemalan case against General Rios Montt.\footnote{Tribunal de Alto Riesgo A, Sentencia C-01076-2011-00015 (Rios Montt, Rodriguez Sanchez) Of. 2o, Judgment, 2 May 2011, Folio 697, available at http://paraqueseconozca.blogspot.com/, last accessed on 28 April 2014:}
A court in Bosnia and Herzegovina, applying a provision identical to Article 7(2)(a) in a crime against humanity case, provided a helpful list of factors from which to infer policy:

The following factual factors are considered with regard to establishing the existence of a policy to commit an attack:
- concerted action by members of an organization or State;
- distinct but similar acts by members of an organization or State;
- preparatory acts prior to the commencement of the attack;
- prepared acts or steps undertaken during or at the conclusion of the attack;
- the existence of political, economic or other strategic objectives of a State or organization furthered by the attack; and
- in the case of omissions, knowledge of an attack or attacks and willful failure to act.60

Similarly, in Sexual Minorities Uganda v. Scott Lively,61 a US court upheld the contrast between isolated or sporadic acts versus policy:

one ought to look at these atrocities or acts in their context and verify whether they may be regarded as part of an overall policy or a consistent pattern of inhumanity, or whether they instead constitute isolated or sporadic acts of cruelty or wickedness.62

While this was a civil law case, it relied on criminal law authorities, and on this point the court referred to the late Antonio Cassese.

As can be seen, the available authorities draw the contrast between (a) crimes with State or organizational support or encouragement versus (b) crimes that are ‘haphazard’, ‘coincidental’, ‘random’, ‘sporadic’, and carried out by ‘uncontrolled and uncontrollable elements’. They have not required direct proof of formal adoption of policy or internal workings of organizations. They have quite easily inferred policy where the events speak for themselves. It can usually be seen readily that the crimes are not a mere crime wave but rather must have involved behind-the-scenes direction, support or encouragement.

4.5.3.1. The Gbagbo Adjournment Decision Shows the Value of Clarification

An early ICC case shows the potential dangers of neglecting this jurisprudence. The case against Laurent Gbagbo, the former President of the Ivory Coast, concerned large-scale killings, assaults and rapes, committed by pro-Gbagbo State forces and youth militia, against civilians who were perceived to support the rival candidate to Gbagbo. The case presented by the Prosecutor focused on four incidents, involving over 294 crimes against civilians, and also referred to 41 other incidents.

To establish the policy element, the Prosecutor had offered a significant amount of direct evidence (witnesses, police records, photographs, videos) as well as indirect evidence. The evidence attested to: repeated attacks by pro-Gbagbo forces against civilians supportive of his political opponent; the failure of police to intervene; the participation of police in crimes; preparation for atrocities, such as policemen bringing condoms to the site where they raped female protestors; measures to identify supporters of the opposition; public statements of leaders of the pro-Gbagbo inner circle; internal instructions; prior warnings that unarmed demonstrators would be killed; and witness reports that perpetrators indicated that they were targeting victims because of their opposition to Gbagbo.

63 See International Criminal Court, “Document Amendé de Notification des Charges”, 13 July 2012, ICC-02/11-01/11-184-AnxI-Red (available in French only) (“Gbagbo DCC”). The attacks overall involved over 1,300 victims; the four charged incidents involved over 294 crimes against civilians.
64 Ibid., paras. 21, 37, 40, 44, 50, 81–84.
Nonetheless, the majority was not satisfied of a policy from this evidence. In June 2013, a majority of Pre-Trial Chamber I adjourned the confirmation hearing to allow the Prosecutor to collect and present additional evidence.\(^{65}\) The majority requested additional evidence about specific meetings at which the policy was adopted and its internal promulgation; for example:

How, when and by whom the alleged policy/plan to attack the ‘pro-Outtara civilian population’ was adopted, including specific information about meetings at which this policy/plan was allegedly adopted, as well as how the existence and content of this policy/plan was communicated or made known to members of the ‘pro-Gbagbo forces’ once it was adopted.\(^{66}\)

The majority also requested additional evidence about the co-ordination, structure and operating methods of the ‘inner circle’ of the pro-Gbagbo forces.\(^{67}\)

By requesting such specific evidence, after declaring the proffered evidence to be inadequate, the majority appears to have in mind heightened legal and evidentiary requirements for the policy element. There are three main concerns with the majority approach.

First, the majority’s approach appears to reflect a formalized, bureaucratic conception of the policy element. The requests relate to specific meetings at which a policy was adopted, dates of such meetings,\(^{68}\) inner workings and internal communication of the policy to the rank and file. That conception is somewhat understandable, given that one common sense of the word ‘policy’ does indeed connote something official and formally adopted, perhaps by a Cabinet or board of directors, and then promulgated to the levels below. But it contradicts the meaning of the juridical term ‘policy’ as elaborated in the authorities, which emphasize that it need not be formalized, express, formally adopted, and so on.

\(^{65}\) See International Criminal Court (Pre-Trial Chamber I), \textit{Prosecutor v. Laurent Gbagbo}, Decision Adjourning the Hearing on the Confirmation of Charges Pursuant to Article 61(7)(c)(i) of the ICC Statute, 3 June 2013, ICC-02/11-01/11-432 (‘Gbagbo Adjournment Decision’).

\(^{66}\) \textit{Ibid.}, para. 44.

\(^{67}\) \textit{Ibid.}, for the evidence that was provided on the pro-Gbagbo forces, the inner circle, its membership, its control, and its meetings, see \textit{Gbagbo DCC}, paras. 59–86, \textit{supra} note 63.

\(^{68}\) \textit{Gbagbo Adjournment Decision}, para. 44, see \textit{supra} note 65.
Second, the majority approach is not only in conflict with past jurisprudence, it is also undesirable practically and normatively. Practically, direct proof of formal adoption would usually be difficult to obtain. In the absence of written minutes, which will surely be rare, the approach almost mandates insider testimony for any crime against humanity case. Normatively, there does not seem to be a good principled reason to restrict crimes against humanity to crimes that were bureaucratically endorsed at the highest level. Doing so is not required by any available theory of crimes against humanity. Indeed, the paradigm of adopting policies at meetings seems to reflect a culturally specific concept of organizations, and does not reflect the diverse types of human organizations that may orchestrate mass crimes.

Third, another problem with the majority’s approach is that it is epistemologically over-cautious and rarified. The majority indicated its reservations about the inferences it was asked to draw, and thus requested direct evidence of formal adoption. However, the crucially important point is that a policy will almost always be a matter of inference. This is why past jurisprudence emphasizes that a policy can be inferred from the manner in which the acts occur. It is understandable for a diligent judge to ask: “How can I be sure there is a State or organizational policy unless I have proof of the adoption of the policy?” The answer is that we don’t need the ‘smoking gun’. We can prove ‘P’ (policy) by proving the implausibility of ‘not-P’. In other words, we can infer the policy element from the sheer absurdity of the rival hypothesis, which is that these hundreds of crimes, committed by pro-Gbagbo forces against anti-Gbagbo forces, with perpetrators making statements indicative of a common purpose and coordination, were actually just a coincidence. It is implausible that this was a simple ‘crime wave’ of individual acts occurring without any State or organizational co-ordination or at least encouragement.

4.5.3.2. Subsequent ICC Cases Adhere to Global Jurisprudence

Happily, the Gbagbo adjournment decision was not the last word in that case. After assessing the additional evidence proffered by the Prosecutor, Judge Hans-Peter Kaul sided in favour of confirmation, thereby forming a new majority. Moreover, as the majority confirmation decision shows, Judge Kaul appears to have reconsidered and modified some of his views

---

69 Ibid., para. 36.
on the policy element. The result is one of the most careful and helpful discussions of the policy element to date in ICC jurisprudence, reflective of the approach of other national and international authorities. The confirmation decision will be one of the most important aspects of the valuable legacy left by Judge Kaul.

The Gbagbo confirmation decision affirms that the requirements of ‘attack’ are less demanding than the requirements of ‘widespread or systematic’, and thus that policy is less demanding than ‘systematic’. It also holds that ‘there is no requirement that a policy be formally adopted’ and that evidence of planning is relevant but not required.

Subsequently, the Katanga trial chamber judgment provided an even more careful and thorough analysis of Article 7(1), 7(2)(a) and the policy element. Katanga correctly distinguished between the test for ‘attack’ and the test for ‘widespread or systematic’. The decision notes that a policy need not be formalized and can be manifested by action or deliberate inaction to encourage crimes. The chamber rightly noted that it would be relatively rare that a State or organization intending to encourage an attack would adopt and disseminate an established plan to this effect. Thus, in most cases, it would be necessary to deduce the policy from, for example, the repetition of acts, preparatory activities, and orchestrated or co-ordinated activities.

These and other cases show that the ICC is aligning with the broader web of global authorities. Nonetheless, the deviations in some early

---

70 International Criminal Court (Pre-Trial Chamber I), Prosecutor v. Laurent Gbagbo, Decision on Confirmation of Charges Against Laurent Gbagbo, 12 June 2014, ICC-02/11-01/11-656, paras. 208, 216.
71 Ibid., paras. 210, 215, 216.
72 Katanga Judgment, paras. 1097–1098, 1101, see supra note 1.
73 Ibid., para. 1108.
74 Ibid., paras. 1107–1108.
75 Ibid., para. 1109: « Il est relativement rare, même si on ne peut l’exclure, que l’État ou l’organisation qui entend encourager une attaque contre une population civile adopte et diffuse un projet préétabli ou un plan à cet effet. »
76 Ibid., para. 1109.
77 Pre-Trial Chamber II held in the Bemba confirmation decision that the “policy need not be formalised. Indeed, an attack which is planned, directed or organized – as opposed to spontaneous or isolated acts of violence – will satisfy this criterion”. International Criminal Court (Pre-Trial Chamber II), Prosecutor v. Bemba, Decision Pursuant to Article 61(7)(a) and (b) of the Rome Statute on the Charges of the Prosecutor Against Jean-Pierre Bemba Gombo, 15 June 2009, ICC-01/05-01/08-424, para. 8. Pre-Trial Chamber I made
cases show that even an institution specializing in international core crimes may not be aware of all the nuances of national and international precedent. The challenges are even greater for national courts that deal relatively rare with such crimes, and thus commentary would be of value.

4.5.4. A Policy May be Manifested by Action or Inaction

The final proposed commentary is the following: *While a policy will typically be manifested by the actions of a State or organization, it may also be manifested by a deliberate failure to act which is consciously aimed at encouraging an attack.*

Throughout the authorities since World War II, many different verbs have been used to describe the requisite link between the State or organization and the attack. Those verbs have included: *direct, instigate, promote, encourage* (including by deliberate inaction), *acquiesce, tolerate, approve, condone, countenance and endorse*. It is arguably premature to ascertain precisely what linkage or attitude is required. What is however crucial to convey is that the linkage can be *passive* (for example, acquiesce, tolerate, condone, countenance, implicitly approve, encourage by inaction). Most crimes against humanity prosecuted to date have involved *action*: the agents of the State or organization have directly carried out atrocities. Nonetheless, a consistent thread in the authorities is that passive encouragement or approval can suffice. Indeed, inaction can be relevant in two different ways. First, if agents of a State or organization commit crimes and the State or organization fails to respond, that is an indication of a policy of encouragement. Second, and perhaps more rarely, a State or an organization with a duty to prevent crimes may observe crimes committed by *private actors* against a target group, and deliberately refrain from responding in order to encourage further crimes.

The ICC Elements of Crimes acknowledge policies of passivity, but they do so in a circuitous manner. The introduction to the elements for crimes against humanity says that a State or organization must “actively

---

FICHL Publication Series No. 18 (2014) – page 130

PURL: http://www.legal-tools.org/doc/ae7041/
promote or encourage” the attack. A footnote again reiterates that a policy “would be implemented by State or organizational action”. Only then do the Elements finally acknowledge that “such a policy may, in exceptional circumstances, be implemented by a deliberate failure to take action, which is consciously aimed at encouraging such attack”. Thus, to read only the text, without reading the footnote, would give one an incomplete picture of the provision.

During the deliberations, some delegations had raised an understandable concern about terms like ‘tolerate’, ‘condone’ or ‘countenance’. The concern was that, if such terms are used too loosely, then any time a State was not succeeding in particular crimes, the court might leap to an assumption of policy, without considering other explanations, such as lack of knowledge or inability to respond. An early attempt to address this concern was to require State or organizational ‘action’. However, later deliberations revealed that this solution was too crude. A majority of delegations grew concerned about its incompatibility with authorities indicating that a deliberate failure to respond to private actors could suffice. Thus, different formulas emerged to capture State or organizational inaction, where it was not a matter of mere ineffectiveness but rather deliberate inaction in order to encourage the crimes. Thus, to infer policy, one would need to consider not only the inadequacy of the State’s response but also whether the State had knowledge of the crimes and capacity to respond.

The Element provision certainly has an unusual structure, with the text seemingly requiring ‘action’ and then a footnote acknowledging inaction. It is also unusual that the point that was of greatest importance to the majority of delegations appears in only a footnote. This was agreed on the penultimate day as a package to allow for the consensus adoption of the

78 ICC Elements of Crimes, Introduction to Crimes Against Humanity, para. 3.
79 Ibid., note 6.
80 Ibid.
82 Ibid.
83 This is reinforced by an additional sentence, proposed by Turkey: “The existence of such a policy cannot be inferred solely from the absence of governmental or organizational action” (ICC Elements, footnote 6, emphasis added). Thus, as noted, one must consider whether the State had knowledge and capacity to act.
Elements. While the format is curious, the text and the footnote, read together, are adequately consistent with other authorities.

Other national and international authorities provide additional illumination, and they are clear that State or organizational passivity can suffice. The Kupreškić decision of the ICTY reviewed World War II jurisprudence concerning policies of inaction. That jurisprudence referred to “explicit or implicit approval or endorsement” and required that crimes be “approved of or at least condoned or countenanced by a governmental body”. The 1954 ILC Draft Code referred to crimes “by the authorities of a State or by private individuals acting at the instigation or with the toleration of such authorities”. The Fujimori decision, referred to above, requires that the crimes must be “connected in one way or another to a particular State or organizational authority: they must at least be tolerated by the latter”. The following passage from the Commission of Experts on former Yugoslavia was already cited above, but is equally pertinent and insightful with respect to encouragement by inaction:

Unwillingness to manage, prosecute and punish uncontrolled elements may be another indication that these elements are, in reality, but a useful tool for the implementation of a policy of crime against humanity.

Finally, as scholars such as Kai Ambos and Steffen Wirth have noted, the possibility of policy by inaction is not only supported by authorities, but is also important for the logical construction of Article 7, since ‘policy’ must be distinguished from ‘systematic’. ‘Systematic’ requires State or organizational action, because the crimes must be planned and orchestrated, whereas ‘policy’ includes, inter alia, passive encouragement. Thus widespread crimes committed by private actors, where State authorities deliberately fail to maintain law and order in order to encourage the crimes, can be a crime against humanity.

4.6. Conclusion
The Draft Convention is a welcome initiative. One of its many potential contributions is to help clarify and harmonize the definition. Clarifying commentary would be valuable (1) to mitigate legitimate concerns about Article 7 and thereby bolster acceptability of the Convention; (2) to increase the effectiveness of the Convention by forestalling restrictive misinterpretations; (3) to reduce fragmentation of the law of crimes against humanity, by showing that many diverse national and international authorities converge in regarding ‘policy’ as a modest test, that does what it is generally agreed that crimes against humanity should do, namely to exclude ordinary crimes.
On the Proposed Crimes Against Humanity Convention
Morten Bergsmo and SONG Tianying (editors)

This anthology is about the need for and nature of a convention on crimes against humanity. It uses the Proposed Convention on the Prevention and Punishment of Crimes Against Humanity as an important reference point. 16 authors discuss how such a convention may consolidate the definition of crimes against humanity, and develop measures for their prevention and punishment, decades after the conclusion of the Genocide Convention and Geneva Conventions. The authors include Leila N. Sadat, Eleni Chaitidou, Darryl Robinson, María Luisa Piqué, Travis Weber, Julie Pasch, Rhea Brathwaite, Christen Price, Rita Maxwell, Mary Kate Whalen, Ian Kennedy, SHANG Weiwei, ZHANG Yueyao and Tessa Bolton. It contains a preface by late Judge Hans-Peter Kaul and a foreword by Hans Corell.

The book is inspired by the rationale of crimes against humanity to protect against the most serious violations of fundamental individual rights, and its realization especially through domestic mechanisms. Such consciousness calls upon appropriate definition and use of contextual elements of the crime, effective jurisdiction for prevention and prosecution, and robust inter-State co-operation. The book considers individual State experiences in combating crimes against humanity. It underlines the importance of avoiding that the process to develop a new convention waters down the law of crimes against humanity or causes further polarisation between States in the area of international criminal law. It suggests that the scope of the obligation to prevent crimes against humanity will become a decisive question.
